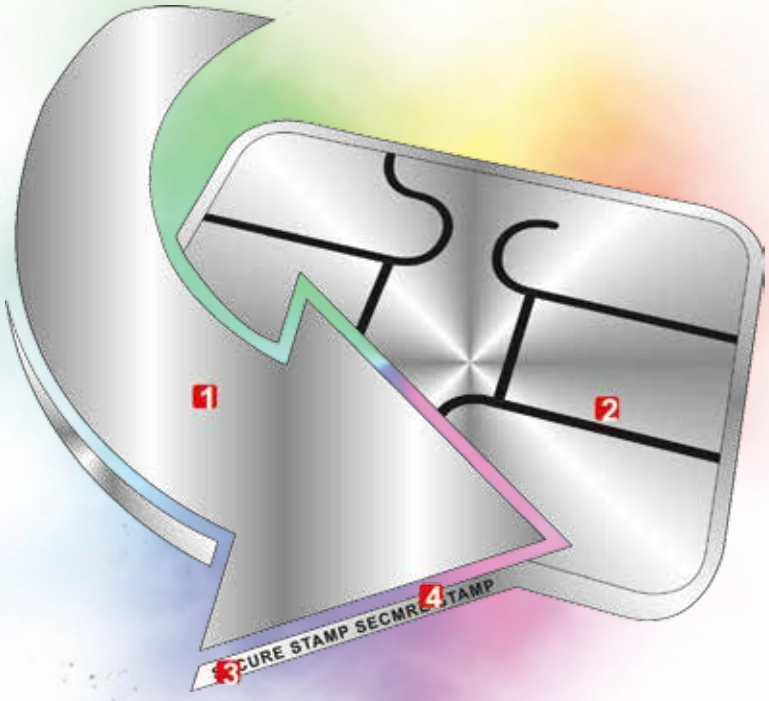
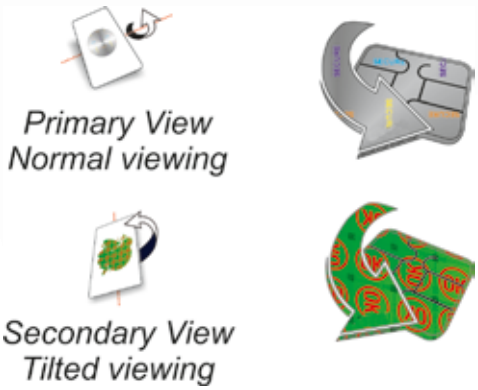
Laser-etched Hologram
Two-factor security



Level 1 Authentication

1 ***Primary Authentication***
The Authentication angle allows the user to instantly verify the product. When tilted at a tight viewing angle the security feature switches from Primary view to the secondary view showing a very bright group of "OK"



Additional Authentication Components

1 ***Tint***
Background texture made up of lots of dots

2 ***Lens***
A high resolution lens effect

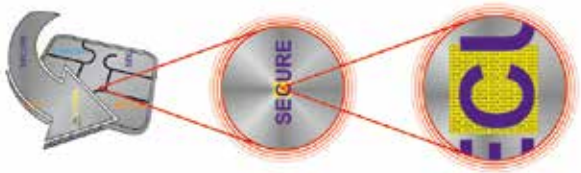
3 ***Microtext***
Text which can be seen under magnification

4 ***Microerror***
An intentional spelling mistake within the Microtext which aids in authentication

Hologram can be personalised with features which compliment your design
Other features include:

- Kinetic effects including image switches
- Microtext ranging from 150µ to 350µ tall
- 3D text and effects

Covert Holographic Authentication
Uses authentication tools to verify covert features within the OVD



100% *400%* *2000%*
